## 6 Handling Precautions

### 6.1 Operating Temperature

Make sure that the temperature inside the equipment does not exceed the recommended operating temperature

### 6.2 Durability of the Image Sensor

The on-chip color filter of the sensor may be decolorized if a large amount of light enters into the sensor. Such conditions of use should be avoided as no product warranty is given for de-colorization. Be sure to take protective measurements against continuous exposure to intense light.

### 6.3 ESD Protection

Anti-ESD measures should be taken for this camera module in the same manner as semiconductor devices.

- (1) Either handle bare handed or use non-chargeable gloves, cloth or material. Also use conductive shoes.
- (2) When handling directly use a wrist strap.
- (3) Install grounded conductive mats on the floor and working table to prevent the generation of static electricity.
- (4) Discharge using ionized air or other means is recommended when handling this camera module.

### 6.4 Storage and Operating Environment

Avoid storage or use under high temperature, high humidity and dusty conditions.

### 6.5 Mechanical Strength

This camera module is a precision optical part, so care should be taken not to apply excessive mechanical shock or force.

### 6.6 Remodeling

Any remodeling or process at customers should be avoided. No product warranty will be granted if the product is once remodeled or processed.

---

## 6.7 NAND FLASH

The data in the NAND FLASH should not be modified or overwritten. Once they are modified or overwritten, no product warranty may be able to be given.

## 6.8 White Pixels

The image-sensing device is vulnerable to natural radiation such as cosmic radiation that may cause incidental defect resulting in white pixel. Although these white pixels are corrected during the final inspection and adjustment process of the camera module production, a minor number of the product might be affected during the storage and shipment, and "white pixel" may appear on incoming stage at customer production site. As the occurrence of white pixels is due to natural behavior, it's beyond supplier's control.

## 6.9 Vertical line noise in low light condition

Rarely a vertical line noise may happen in the case when a gain sets up in the low light condition. It's not a malfunction but the characteristic of CMOS Image Sensor

## 6.10 Safety Standards

This product is manufactured as an unfinished product and no particular safety standard is applicable to this product alone. Users should ensure that finished products using this camera module conform to applicable safety standards.

## 6.11 Location of Use and Storage

Do not shoot extremely bright objects (lights or sun) for long hours.

In addition, please refrain from using or storing at the following locations.

- Extremely hot or cold place (Operating temperature: -5°C to +60°C(23°F to 140°F))
- Near TV/radio station which produces intense radio emission
- The place where is affected by reflects of fluorescent light or light from windows
- Under unstable illumination (Flickers will be generated)
- Place with intense vibration
- Where it is subject to radiation from laser beams

---

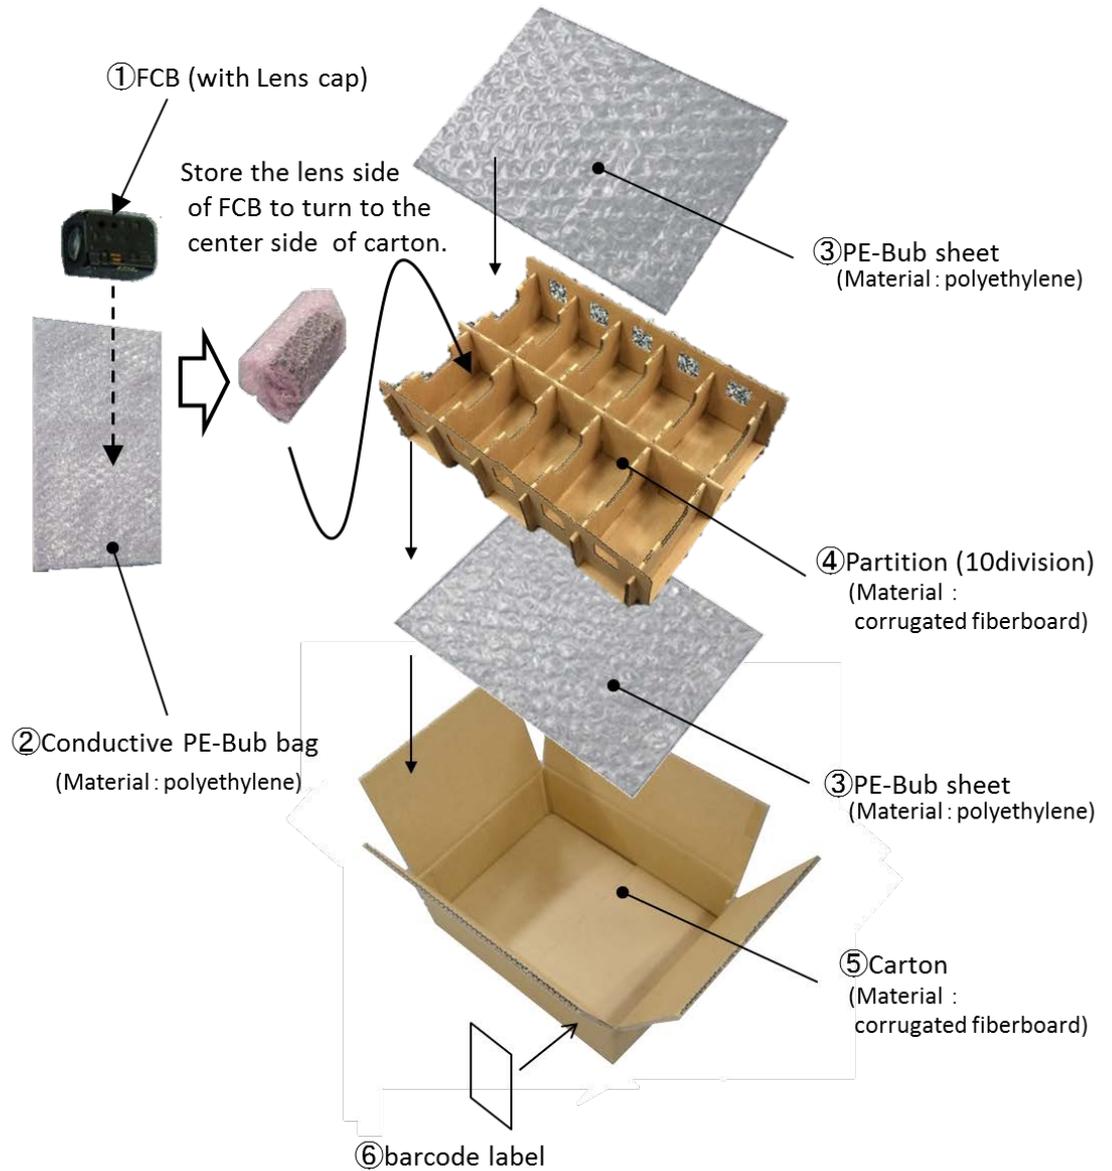

### 6.12 When using in outdoor camera

- The outdoor camera should install inside direct lightning protection zone. Lightning rod is mandatory for camera install outside direct lightning protection zone.
- Surging protector for power supply and signal port must install for outdoor camera. The distance between surging protector and camera should not longer than 0.5m.
- Shielded cable for power supply and signal should be use for outdoor equipment. The cable should lay inside iron conduit. The conduit should be well grounded.
- Cable should lay under the eaves for outdoor engineering, Aerial cable is prohibited.
- The design of ground for outdoor equipment and cable should combine with ground of building and conform to national and industry standard.
- The ground resistance must not exceed  $4\Omega$  when use independent ground. The area of ground cable must exceed  $25\text{mm}^2$
