Next Generation Lenses for ϕ 16mm Sensors

- Utilizes high precision aspherical lenses to reduce distortion and decrease the minimum object distance.
 - XD (eXtra low Dispersion) glass virtually eliminates chromatic aberration and produces HD resolution.
 - Incorporates Kowa's special wide-band multi-coating to increase transmission from visible to NIR.
 - Kowa's floating mechanism system minimizes optical aberrations from close distance to infinity.
 - Advanced design decreases glare and refraction.
 - Metal body and locking screws improve durability to shock and vibration.
